# 1 Search Page

Open the program, and it shows the search page.

P1 Search page 1

The search page contains the above information:

Device list information: SN, IP address, port, sub net mask, MAC address.

Search type: all, IPV4, IPV6.

Upgrade button: Click it for batch upgrade.

Refresh button: Click it for device search.

Login button: Click to login the selected device.

Exit button: Exit the search page

## 1.1 Open device web

Select the device, and right click mouse, it shows up "Open device web". Click the menu, and your default browser will open the device web.

The screenshot shows the ConfigTool application window. At the top, there is a title bar with the text 'ConfigTool'. Below the title bar is a section titled 'Device List' containing a table with the following columns: SN, IP Address, Port, Subnet Mask, Default Gateway, and Mac Address. The table lists 24 rows of device information. Row 40 is highlighted in blue, and a tooltip with the text 'Open Device Web' is displayed over it. Below the table, there is a tip: 'Tip: You can click "login" button directly and then input corresponding information to login.' At the bottom of the window, there is a dropdown menu currently set to 'All', and four buttons: 'Upgrade', 'Refresh', 'Login', and 'Logout'.

SN	IP Address	Port	Subnet Mask	Default Gateway	Mac Address
22	10.45.1.38	37777	255.255.0.0	10.45.0.1	00:01:5b:00:34:4f

P12 Batch upgrade 1

P13 Batch upgrade 2

P14 Batch upgrade 3

## 4 Note:

First:

If upgrade failed, please make sure the upgrade file is correct and the device has the correct software version.

Second:

If device software has encountered bug and do not work correct. You can use 3800 port to login device, but you can't get other information.

Third:

If you want to use batch upgrade function, please make sure the device you select can use the same upgrade file.
